

Listing of Claims:

1. (Currently Amended) A communication device comprising:
mail creation means for creating an electronic mail;
detecting means for detecting a current position of the
communication device; and

5 transmission means for attaching image information
corresponding to the current position detected by the detecting
means to the electronic mail and transmitting the electronic mail
with the image information attached thereto.

*By
Conce.* 2. (Currently Amended) The device according to claim + 16,
wherein said transmission means comprises:

storing means for storing regional information specific to
areas; and

5 reading means for reading the regional information
corresponding to an area including said current position from
said storing means and attaching the regional information to the
electronic mail.

3. (Original) The device according to claim 2, wherein said
storing means stores at least one of scenic images of areas, logo
marks of areas, and advertisement images corresponding to areas.

4. (Original) The device according to claim 2, wherein said storing means comprises a read-only memory.

5. (Original) The device according to claim 2, wherein said storing means comprises a rewritable memory and means for writing externally supplied information to said rewritable memory.

6. (Currently Amended) A radio communication system comprising:

a communication terminal; and

a cell station ~~connecting~~ connected to said communication terminal via a radio channel,

Pl. Cont. wherein said communication terminal ~~comprising~~ comprises:

mail creation means for creating an electronic mail;

detecting means for detecting a current position of the communication device; and

transmission means for attaching image information corresponding to the current position detected by the detecting means to the electronic mail and transmitting the electronic mail with the image information attached thereto.

7. (Currently Amended) The system according to claim ~~6~~ 18, wherein said terminal comprises storing means for storing regional information specific to positions of the terminal, and

said transmission means reads the regional information
5 corresponding to the current position from said storing means and
attaches the regional information to the electronic mail.

8. (Original) The system according to claim 7, wherein said
storing means stores at least one of scenic images of areas, logo
marks of areas, and advertisement images corresponding to areas.

9. (Original) The system according to claim 7, wherein said
storing means comprises a read-only memory.

B1 Cont.
10. (Original) The system according to claim 7, wherein
said storing means comprises a rewritable memory and means for
writing externally supplied information to said rewritable
memory.

11. (Previously Presented) A radio communication system
comprising:

a communication terminal; and

5 a cell station connected to said communication terminal via
a radio channel,

wherein said communication terminal comprises:

mail creation means for creating an electronic mail;

detecting means for detecting a current position of the communication device; and

10 transmission means for attaching position information indicating the current position detected by the detecting means to the electronic mail and transmitting the electronic mail with the position information attached thereto to the cell station, and

15 wherein said cell station comprises means for attaching regional information corresponding to the current position based on the position information and for transmitting the electronic mail with the regional information attached thereto.

By Cont.
12. (Currently Amended) The system according to claim ~~11~~ 21, wherein said cell station comprises:

storing means for storing regional information specific to positions of the terminal; and

5 reading means for reading the regional information corresponding to the current position from said storing means and attaching the regional information to the electronic mail.

13. (Original) The system according to claim 12, wherein said storing means stores at least one of scenic images of areas, logo marks of areas, and advertisement images corresponding to areas.

14. (Original) The system according to claim 12, wherein said storing means comprises a read-only memory.

15. (Original) The system according to claim 12, wherein said storing means comprises a rewritable memory and means for writing externally supplied information to said rewritable memory.

16. (New) The device according to claim 1, further comprising:

By Cont.
receiving means for receiving electronic mail with image information attached thereto which is transmitted from another device; and

5 displaying means for displaying the received electronic mail and the received image information with the received image information superimposed on a part of the received electronic mail.

17. (New) The device according to claim 16, wherein the image information comprises one of a scene image and a logo mark.

18. (New) The system according to claim 6, wherein the communication terminal further comprises:

receiving means for receiving electronic mail with image
5 information attached thereto which is transmitted from another device; and

displaying means for displaying the received electronic mail and the received image information with the received image information superimposed on a part of the received electronic
10 mail.

B1 Cont
19. (New) The system according to claim 18, wherein the image information comprises one of a scene image and a logo mark.

20. (New) The system according to claim 11, wherein the regional information comprises image information corresponding to the current position based on the position information.

21. (New) The system according to claim 20, wherein the communication terminal further comprises:

receiving means for receiving electronic mail with image
5 information attached thereto which is transmitted from another device; and

displaying means for displaying the received electronic mail and the received image information with the received image

information superimposed on a part of the received electronic
mail.

*B1
Came*
22. (New) The system according to claim 21, wherein the
image information comprises one of a scene image and a logo mark.
